Java

```java
class Solution {
    public long totalCost(int[] costs, int k, int candidates) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} costs
 * @param {number} k
 * @param {number} candidates
 * @return {number}
 */
var totalCost = function(costs, k, candidates) {

};
```

C++

```cpp
class Solution {
public:
    long long totalCost(vector<int>& costs, int k, int candidates) {

    }
};
```

C#

```csharp
public class Solution {
    public long TotalCost(int[] costs, int k, int candidates) {

    }
}
```
